Sand blasting machines, also known as abrasive blasting machines, are industrial equipment used to clean, roughen, polish, or remove surface contaminants from materials by propelling abrasive media at high speed through compressed air or wheel blasting. They are widely used for rust removal, paint stripping, surface preparation, deburring, and finishing of metal, stone, glass, concrete, and composite parts before coating, painting, welding, or further processing. In 2025, global Sand Blasting Machines production reached approximately 18636 units, with an average global market price of around 7,405 USD/unit. The production capacity for Sand Blasting Machines in 2025 was approximately 20000 units. The typical gross profit margin for Sand Blasting Machines between 20% and 40%.

The sand blasting machines market is driven by growing demand for surface preparation, corrosion removal, coating pretreatment, and precision finishing across manufacturing, automotive, shipbuilding, aerospace, construction, and metal fabrication industries. With increasing requirements for product durability, coating adhesion, automation, environmental protection, and workplace safety, the market is gradually shifting from traditional manual sand blasting systems toward automated, dust-controlled, recyclable media, and robotic blasting solutions.
