According to our (Global Info Research) latest study, the global Sand Blasting Service market size was valued at US\$ 341 million in 2025 and is forecast to a readjusted size of US\$ 505 million by 2032 with a CAGR of 5.6% during review period.

Sand blasting service refers to an industrial processing service that uses high-pressure airflow or centrifugal force to propel abrasive materials (such as quartz sand, steel grit, glass beads, etc.) at high speed onto the surface of a workpiece to achieve surface cleaning, removal of oxide layers/coatings, roughening treatment, or surface strengthening. This service is widely used in metal manufacturing, shipbuilding, automotive, building maintenance, and equipment refurbishment, and is a typical surface treatment and post-processing service.

The market for sand blasting services is driven by factors such as the need for surface preparation in industrial applications, the growing demand for refurbishment and maintenance services, and the versatility of sand blasting in various surface treatment processes. Sand blasting helps improve surface quality, adhesion of coatings, and overall durability of treated surfaces. Sand blasting services typically involve the use of specialized equipment, such as sand blasting cabinets, blast rooms, or portable blasting units. Trained professionals operate the equipment and ensure proper safety measures are followed to protect against health hazards associated with abrasive materials and airborne particles. The global sand blasting service market is influenced by factors such as industrial activities, infrastructure projects, demand for refurbishment and maintenance services, and regulatory requirements. Regions with significant industrial sectors, construction projects, and manufacturing activities, such as North America, Europe, and Asia-Pacific, may exhibit higher demand for sand blasting services.
