## Abstracts

According to our (Global Info Research) latest study, the global Sand Control Systems market size was valued at USD 2019.5 million in 2023 and is forecast to a readjusted size of USD 2462.1 million by 2030 with a CAGR of 2.9% during review period.

Sand control refers to managing/minimizing sand and fine production during petroleum production. Sand and fine produced with oil and gas can cause erosion and wear of production facilities/equipments, resulting in production downtime, expensive repairs, and potentially loss of containment (serious safety risk).

The onshore sub-segment led the sand control systems market in 2017 and is projected to dominate the market during the forecast period due to the vast presence of oil & gas reserves and increased dependency on conventional oil & gas. The offshore application segment is expected to grow at the fastest rate during the forecast period.
