According to our latest research, the global Sand Cooling System market size will reach USD million in 2031, growing at a CAGR of %over the analysis period.

A sand cooling system is a type of industrial equipment used to cool sand that is used in various manufacturing processes, such as foundry casting and metal casting. The system typically consists of a cooling drum or conveyor belt that moves the hot sand through a series of cooling chambers or coils, where it is cooled using air or water. This helps to reduce the temperature of the sand to a level that is suitable for use in the manufacturing process. Sand cooling systems are important for maintaining the quality and consistency of the sand used in casting operations.
