A sand pool filter tank is a key component of a swimming pool filtration system, designed to remove impurities and debris from the pool water to maintain clarity and hygiene. The tank houses a bed of specially graded sand, which acts as a natural filtration medium. As pool water is pumped into the tank, it passes through the sand bed, where dirt, algae, and other contaminants are trapped within the tiny sand particles. Clean water is then returned to the pool, ensuring a continuous cycle of filtration. Sand pool filter tanks are known for their efficiency, low maintenance requirements, and longevity, making them a popular choice for both residential and commercial pools. They are typically equipped with multi-port valves that facilitate easy backwashing and rinsing, ensuring the sand bed remains effective over time.
