## Abstracts

The sand injection molding machine uses compressed air to evenly inject the molding sand into the sand box for pre-compacting, and then applies pressure for compaction.

According to our (Global Info Research) latest study, the global Sand Shot Molding Machine market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The sand-shot molding machine uses coated sand to make cores, and is suitable for both hot core boxes and cold core boxes. It is characterized by the application of two guide columns, the vertical parting of the mold opening and closing, and the installation of two different molds at the same time. Sand-shooting molding machines are widely used in the foundry industry. The cores manufactured by sand-shooting molding machines have precise dimensions and smooth surfaces. The working principle of the sand injection molding machine is to inject the core sand mixture with liquid or solid thermosetting resin as the binder into the heated core box, and the sand core is preheated in the core box and hardened to a certain thickness (about 5 ~10 mm) and take it out to form a finished high-quality sand core with a smooth surface and precise dimensions.
