According to our (Global Info Research) latest study, the global Sandblasting Services market size was valued at US\$ 1171 million in 2025 and is forecast to a readjusted size of US\$ 1679 million by 2032 with a CAGR of 5.3% during review period.

To address the problems of inefficiency, difficulty in guaranteeing cleanliness, and challenges in handling complex structures associated with traditional surface cleaning and pretreatment methods, sandblasting services have emerged. Since the invention and application of sandblasting technology in industrial production at the end of the 19th century, key technological breakthroughs have been achieved in the field of metal and non-metal surface treatment. Currently, sandblasting services have developed into a professional process system encompassing dry sandblasting, wet sandblasting, vacuum recovery sandblasting, and various media types including steel shot, glass beads, ceramic sand, and natural sand. This service is widely used in shipbuilding and repair, large steel structures, automotive parts refurbishment, mold cleaning, concrete wall treatment, and cultural relic protection and restoration. It can efficiently remove rust, scale, old coatings, and dirt, significantly improving the surface roughness and cleanliness of the substrate, thus providing an ideal base for subsequent processes such as spraying, electroplating, and bonding. It is a core technological means to achieve efficient, uniform, and environmentally friendly surface pretreatment.
