According to our (Global Info Research) latest study, the global SAR Satellite Services market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Satellites with Synthetic Aperture Radar (SAR) orbit the Earth in a sun-synchronous LEO polar orbit and data acquisitions can be made at any time of day or night and independent of cloud coverage, collecting both amplitude and phase data. The SAR satellites have repeating paths which, using two phase datasets for the same location at different times, allows for interferometric SAR (InSAR) showing relative ground displacements between the two datasets along the direction of the radar beam.
