## Abstracts

According to our (Global Info Research) latest study, the global Satellite Communication Phased Array Antenna market size was valued at USD 435.5 million in 2023 and is forecast to a readjusted size of USD 10850 million by 2030 with a CAGR of 58.3% during review period.

Communication satellites can be divided into low orbit satellites (LEO), medium orbit satellites (MEO) and geosynchronous orbit satellites (GEO). Compared with medium orbit satellites (MEO) and geosynchronous orbit satellites (GEO), low orbit satellites (LEO) is about 160 to 2,000 kilometers from the height of the earth, which is relatively low, making the transmission delay short. Satellite Communication Phased Array Antenna plays a vital role during this process. The satellite communication phased array antenna is antenna arrays that have the unique ability to change the shape and direction of the radiation pattern without physically moving the antenna. The satellite communication phased array antenna is composed of multiple antenna units. By changing the phase and amplitude of the signal transmitted by each antenna unit channel and changing the aperture illumination function of the phased array antenna, the fast scanning and shape change of the antenna beam can be realized. Elements in an antenna array are placed in such a way that the signals transmitted by individual antennas sum up and provide better gain, directivity and performance in a particular direction.

Global key players of satellite communication phased array antenna include SpaceX, Boeing, Kymeta, Lockheed Martin, etc. Global top five manufacturers hold a share over 56%. In terms of product, multiband is the largest segment, with a share over 99%. And in terms of application, the largest application is commercial, with a share over 99%.
