According to our (Global Info Research) latest study, the global Satellite Electric Thruster market size was valued at US\$ 482 million in 2024 and is forecast to a readjusted size of USD 714 million by 2031 with a CAGR of 5.9% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The satellite propulsion system is also the power device of the satellite. It is used to provide the force and torque required for satellite orbit change and maintenance, and satellite pointing change and maintenance. Its essence is to use the working fluid it carries and rely on the reaction principle to enable the satellite to obtain external forces to change its state. The electrothermal propulsion system uses electric energy to heat the propellant, and the heated propellant is accelerated and ejected through the Laval nozzle to generate thrust. Its advantages are simple structure, cheap price, safety and reliability, convenient operation and maintenance, etc.
