According to our (Global Info Research) latest study, the global Satellite Enabled IoT Software market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Internet of Things is revolutionizing. With IoT, various devices like smartphones and other wearable device are interconnected with homes, cities, and vehicles to collect a huge amount of data, which is to analyzed and processed for even better and enhanced communication. However, devices on ground possess limited capabilities and geographical reach. These devices are confined to a smaller geographical location, and thus, restricts the ability to collect and store a wide area of data.

According to our research, the number of global connected IoT devices was about 14 billion, grew by 18% compared to 2021. The data released by the Office of the Central Cyberspace Affairs Commission shows that, by the end of 2022, China has built and opened a total of 2.3 million 5G base stations. 110 cities across the country have reached the gigabit city construction standards. Gigabit optical network has the ability to cover more than 500 million households. IPv6 scale deployment application is deeply promoted. The number of active users exceeds 700 million, mobile network IPv6 traffic accounted for nearly 50%. The total size of China's data center racks exceeds 6.5 million standard racks, with an average annual growth rate of more than 30% in the past five years.

The Global Info Research report includes an overview of the development of the Satellite Enabled IoT Software industry chain, the market status of Military (L Band, Ku-Band), Aerospace (L Band, Ku-Band), and key enterprises in developed and developing
