## Abstracts

According to our (Global Info Research) latest study, the global Satellite market size was valued at USD 11820 million in 2023 and is forecast to a readjusted size of USD 22550 million by 2030 with a CAGR of 9.7% during review period.

A satellite is an object that orbits another object. In space, satellites may be made by man, or they may be natural. Of course, the market we research on is based on artificial satellites in this report. Artificial satellites come from more than 50 countries and have used the satellite launching capabilities of ten nations. A few hundred satellites are currently working, but thousands of unused satellites and satellite fragments orbit the Earth as space debris. The largest satellite is the International Space Station, which was put together by several different countries (including the organizations of NASA, ESA, JAXA and RKA).

Global Satellite main manufacturers include Lockheed Martin, Thales Alenia Space and Northrop Gruman, totally accounting for about 57% of the market. North America is the largest market of Satellite, holding a share over 50%. As for the types of products, it can be divided into LEO, GEO, MEO and others. The most common products is LEO, with a share about 80%. As for the types of applications, it is widely used in commercial, national security, science and environment and others. The most common types is in commercial field, with a share over 66%.
