Satellite monitoring and control services refer to the process of managing and operating a satellite from the ground. This involves monitoring the satellite's health, controlling its orbit and positioning, and ensuring that it is functioning properly.

Satellites are used for a wide range of applications, including communication, navigation, weather forecasting, remote sensing, and scientific research. To ensure that these satellites operate as intended, they need to be carefully monitored and controlled from the ground.

Satellite monitoring and control services typically involve a team of highly skilled engineers and technicians who use specialized equipment and software to track the satellite's movements, manage its power and propulsion systems, and communicate with it via radio signals. They also analyze data from the satellite's sensors to ensure that it is performing as expected and make adjustments as needed.
