According to our (Global Info Research) latest study, the global Satellite Reaction Wheel market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Reaction wheels are an integral part of any type of satellite and spacecraft, and they ensure three-axis attitude control without the need for external torque sources such as rockets or propellants. They are becoming increasingly important in today's aerospace industry as they offer safer, more flexible and lightweight options for precise control of space systems.

Reaction wheels are used to control the attitude of a satellite without the use of thrusters, which reduces the mass fraction needed for fuel.
