According to our (Global Info Research) latest study, the global Saucepans market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A saucepan is a cooking vessel generally used on top of a range for heating food and/or reducing sauces. Saucepans can be made of a variety of materials, like aluminium and stainless steel, and the cooking surface can have a non-stick coating, like Teflon. As with all pans the heavier the gauge of the metal the better (especially at the base); it enables more even heat distribution, which makes sticking and burning less likely.
