Abstracts

The global Savory Oil market size is expected to reach \$ 1648 million by 2032, rising at a market growth of 5.4% CAGR during the forecast period (2026-2032).

Global sales of savory oil reached 21,280 tons in 2025, with an average price of US\$52,361 per ton.

Savory essential oil is extracted from *Satureia Montana* through steam distillation of the blossom and Plant. The name *Satureja* is derived from Latin word *satureia* meaning herb. Savory essential oil is normally used as the booster of immune systems. It is also known as oil of Mountain savory.

The supply of raw materials for peppermint oil exhibits significant geographical concentration and seasonality. The main global production areas are concentrated in Eastern Europe (Hungary, Croatia, Albania) and the Mediterranean region (Italy, France, Spain). The temperate continental climate (summer peppermint) or Mediterranean climate (winter peppermint) of these regions is ideal for its growth and ensures sufficient accumulation of active ingredients. Raw material costs account for 45-55% of the total cost. Due to the moderate extraction rate (0.5%-1.5%), approximately 65-200 kg of hay is needed to extract 1 kg of essential oil, resulting in moderate raw material consumption. However, summer peppermint is an annual plant requiring annual sowing, while winter peppermint, although perennial, grows slowly, leading to a longer land investment cycle. Labor costs account for 20-25%, as harvesting and pre-distillation processing require significant manual labor, especially given the limited mechanization under organic farming practices in Eastern Europe. Processing costs account for approximately 20-25% of the total cost. Steam distillation is a mature process, but precise control of the distillation time (usually 2-3 hours) is

crucial to prevent excessive oxidation of phenolic components such as carvacrol and thymol. It's worth noting that while peppermint oil, oregano oil, and thyme oil are similar in composition (all containing high levels of carvacrol and thymol) and have similar market prices (US\$50-70/kg), their aroma characteristics differ significantly. Peppermint oil leans towards a spicy herbal note, while oregano oil is stronger and thyme oil is milder. Therefore, these three products compete differentially in the high-end flavoring and aromatherapy market. Quality control and testing costs account for 10-15%, requiring GC-MS to ensure carvacrol content is within the 30-50% range and to test for microbial indicators to meet food-grade and organic certification requirements. Overall, peppermint oil is a mid-priced essential oil with a stable supply chain and clearly defined functions. Its cost structure is significantly influenced by the seasonality of agricultural production, the prevalence of organic certification, and competition from substitutes such as oregano and thyme.
