Lithium niobate thin film (LNOI) refers to a single crystal layer of lithium niobate prepared on heterogeneous substrate materials such as silicon, quartz, and fused silica using Smart cut technology, including ion implantation, transfer bonding, exfoliation, and polishing. Lithium niobate (LiNbO_3) crystal is an important optoelectronic material widely used in optical communication, quantum communication, aerospace and other fields. It is one of the basic materials for modulators, 5G filters, memory and detectors. Lithium niobate thin films are derived from lithium niobate crystals and possess unique optoelectronic and chemical properties.
