Abstracts

According to our (Global Info Research) latest study, the global SAW Quadplexers market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

The SAW quadplexer is a combination of four filters, sharing a single node. The passband loading and isolation objectives for the quadplexer are the same as for the duplexer. There are Band 25/4 and Band 1/3 quads. A quadplexer allows two frequency bands to be connected to the antenna at the same time, which is useful for applications such as carrier aggregation (where a phone might need to receive both bands at the same time).
