## Abstracts

According to our (Global Info Research) latest study, the global SAW Steel Pipe market size was valued at US\$ 32926 million in 2025 and is forecast to a readjusted size of US\$ 43667 million by 2032 with a CAGR of 4.1% during review period.

SAW Steel Pipe, or Submerged Arc Welded pipe, is a high-strength engineering solution where the welding arc is shielded beneath a granular flux, resulting in exceptionally stable and high-quality seams. It is primarily categorized into Longitudinal (LSAW) and Spiral (SSAW) types. LSAW pipes are fabricated from heavy steel plates and are prized for their heavy wall thickness and superior pressure resistance, making them the industry standard for critical high-pressure oil and gas trunklines. In contrast, SSAW pipes are manufactured from steel coils using a helical forming process, which allows for the efficient production of large-diameter pipes from narrower strips. This makes them a cost-effective and versatile choice for water conservancy, structural piling, and low-to-medium pressure fluid transmission.

In 2025, global SAW Steel Pipe production reached approximately 40 million tons and average price was 800 usd/unit.
