According to our (Global Info Research) latest study, the global Sawn Grade Diamond Single Crystal market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Sawn grade diamond single crystal refers to a high-quality diamond material that is precisely sliced or sawn from a larger diamond crystal. This process ensures a controlled and uniform grain size distribution, making it suitable for applications that require specific sizes and shapes of diamond abrasives. The grain size range is concentrated in 60/70 mesh for coarse, 20/25 for fine; Regular crystal shape, sharp edge, high mechanical strength. It is mainly used for sawing and cutting tools such as saw blades, rope saws and knives. It is mostly used for sawing and cutting of marble, granite, concrete building materials, semiconductor silicon wafers, optical glass, ceramics and other non-metallic hard and brittle materials.

The prospect for sawn grade diamond single crystal is expected to be promising. The demand for high-quality diamond materials in the cutting and sawing industry is growing across sectors such as construction, semiconductor, and optical manufacturing. Sawn grade diamond single crystal offers controlled and uniform grain size distribution, ensuring precise and efficient cutting performance. Its concentration of larger grain sizes in specific mesh ranges allows for customization based on application requirements. The regular crystal shape, sharp edges, and high mechanical strength further enhance its cutting capabilities. However, the market for diamond materials is highly competitive, and the availability of alternative cutting technologies may impact market dynamics. Nonetheless, the increasing demand for high-precision cutting solutions indicates a positive market outlook for sawn grade diamond single crystal.
