Abstracts

The global Sawtooth Cotton Gin market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Sawtooth cotton gin is the most widely used cotton gin in the world. my country's commercial cotton is mainly processed by sawtooth gins. The sawtooth gin has a complex structure and various forms. According to different brushing methods, the sawtooth gin can be divided into brush type and air flow type. The former sprays the high-speed airflow generated by the fan onto the saw teeth, blows the fibers down and sends them to the cotton collecting device. The latter relies on the high-speed rotating brush roller to blow off the fibers on the saw teeth. According to the way the seed cotton enters the gin, it can be divided into the front box and the middle box. The former is that the seed cotton enters the front box of the gin first, and the seed cotton is brought from the front box to the middle box by the saw teeth. The front box and the middle box The barrier ribs between them can prevent large impurities from entering the middle box. The latter is that the seed cotton directly enters the middle box of the gin, and some large impurities such as stiff petals in the seed cotton are cleaned in the pretreatment process. According to the number of saw blades, the sawtooth gin is divided into 171 pieces, 168 pieces, 139 pieces, 128 pieces, 121 pieces, 108 pieces, 100 pieces, 98 pieces, 90 pieces, 88 pieces, 80 pieces, etc.; The size of the saw blade pitch, the saw gin can be divided into 19.4mm, 18mm, 17mm, 16mm and other varieties. The diameter of the saw blade is also divided into 406mm and 320mm. In addition, there are double-saw barrel type, half-rib type, high-efficiency type, etc.

The sawtooth cotton gin uses a high-speed rotating (peripheral speed of about 12 to 13 m/s) circular saw blade to pull the cotton fiber through the rib gap to separate it from the cotton seed. There are two types of brush type and air flow type. Its main working parts

include flower feeding roller, cleaning mechanism, ginning work box, ginning rib, saw blade cylinder, brush roller or air nozzle, cotton collecting box, etc.
