According to our (Global Info Research) latest study, the global Scale and Corrosion Inhibitor Compound market size was valued at US\$ 440 million in 2025 and is forecast to a readjusted size of US\$ 633 million by 2032 with a CAGR of 5.0% during review period.

In 2025, the global production of scale and corrosion inhibitor composites reached 213,600 tons, with an average selling price of US\$2,000 per ton. The global annual production capacity of scale and corrosion inhibitor composites is approximately 400,000 tons, with a gross profit margin of approximately 21.5%. Scale and corrosion inhibitor composites are a class of agents widely used in the water treatment field, combining the functions of scale inhibition (preventing scale buildup) and corrosion inhibition (reducing metal corrosion), aiming to simultaneously protect equipment, improve heat exchange efficiency, and simplify water treatment processes. It is not a single component, but a composite system composed of multiple components in a certain proportion, and can be customized according to water quality, system materials, and operating conditions. The upstream of the scale and corrosion inhibitor composite industry chain includes carboxylic acids, corrosion inhibitor monomers, chelating agents, etc.; the midstream consists of scale and corrosion inhibitor composite manufacturer; and the downstream mainly includes water treatment, environmental protection, and other industries.
