## Abstracts

The global Scalp Cooling Caps market size is expected to reach \$ 123 million by 2032, rising at a market growth of 13.1% CAGR during the forecast period (2026-2032).

In 2025, global Scalp Cooling Caps production reached approximately 1,366 units, with an average global market price of around US\$35,000 per unit. Scalp cooling caps (or cold caps) are specialized, tight-fitting helmets worn by cancer patients during chemotherapy to prevent or reduce hair loss (alopecia). By lowering the scalp's temperature, they constrict blood vessels and reduce blood flow to hair follicles, protecting them from chemotherapy damage.

From a demand perspective, the scalp cooling caps market is supported by the broader shift in oncology care from treatment efficacy alone toward a more balanced focus on patient experience, dignity, and quality of life. In chemotherapy settings, demand is driven by patients' need to manage hair loss, preserve privacy, and maintain confidence during treatment. On the supply side, manual cold caps and automated scalp cooling caps continue to coexist, but hospital-based adoption increasingly favors mechanically controlled solutions with more stable temperature management, clearer operating procedures, and better integration into infusion-center workflows. The long-term growth logic of this market is not limited to cooling performance; it also depends on cap fit, patient comfort, nursing efficiency, reusable service models, and consumable replacement. Clearer regulatory classification and reimbursement pathways are improving market accessibility, although pricing pressure, longer treatment time, and differences in patient suitability may still limit rapid penetration. Overall, this remains a small but specialized medical device segment with steady growth potential, where competition will increasingly center on clinical evidence, service capability, cap design, and regional market access.

This report studies the global Scalp Cooling Caps production, demand, key manufacturers, and key regions.
