A scanning laser methane detector is a device that utilizes laser technology to detect methane gas concentrations in the air, widely used in natural gas pipelines, industrial sites, and environmental monitoring. The device emits a laser beam at a specific wavelength and measures the absorption by methane to quickly and accurately identify the location and concentration of methane leaks. The scanning design allows the detector to cover large monitoring areas, offering non-contact, remote detection with high sensitivity, real-time performance, and safety advantages, effectively preventing the environmental and safety risks associated with methane leaks.
