Scanning Probe Microscope Control System (SPM Control System) is a type of control system that is used to operate scanning probe microscopes (SPMs). SPMs are instruments that use a tiny probe to scan the surface of a sample at the nanometer scale and collect data on the surface features. The SPM Control System is responsible for controlling the movement of the probe and creating images of the surface based on the collected data. It also includes software for processing and analyzing the data collected by the SPM. The SPM Control System is crucial for conducting high-resolution imaging, measuring the physical and chemical properties of the sample surface, and performing various types of surface manipulation experiments.
