According to our (Global Info Research) latest study, the global Schottky Bridge Rectifier market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

A Schottky Bridge Rectifier is a power electronic device typically used to convert AC power to DC power. It uses a bridge rectifier circuit composed of four Schottky diodes (Schottky Diode), which has the characteristics of low voltage drop, fast switching and high efficiency. A Schottky diode is a diode with low reverse leakage current and fast switching characteristics. Since its PN junction is different from that of conventional diodes, it has a lower forward voltage drop and faster recovery speed. This makes Schottky diodes have important applications in high-frequency circuits and high-efficiency circuits. Compared with traditional bridge rectifiers, Schottky bridge rectifiers have lower forward voltage drop and higher conversion efficiency. Therefore, it is widely used in the power input stage of various electronic equipment, such as computers, communication equipment, household appliances, LED lights, etc.
