## Abstracts

A scientific data management system (SDMS) acts as a centralized document management system, collecting, cataloging, and storing data generated by and in a scientific lab. An SDMS is designed to handle unstructured data from data systems like a LIMS or a ELN. With an SDMS, lab researchers, scientists, analysts, and other lab personnel can better store and search for lab data and knowledge, speed up workflows and approval processes, and optimize collaboration between staff. SDMS can be deployed by any type of laboratory—clinical, research, contract, or pharmaceutical—to achieve and ensure data integrity and regulatory compliance, as well as maintain a single source of truth.

According to our (Global Info Research) latest study, the global Scientific Data Management Systems (SDMS) market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
