## Abstracts

The global Scleral GP Material market size is expected to reach \$ 49.11 million by 2032, rising at a market growth of 10.0% CAGR during the forecast period (2026-2032).

Scleral GP (Gas Permeable) material is a highly oxygen-permeable, rigid plastic—typically fluorosilicone acrylate—used to manufacture large-diameter contact lenses that vault over the entire cornea to rest on the sclera. It provides superior comfort for severe dry eye, keratoconus, and corneal irregularities by creating a fluid-filled, moisture-retaining layer, offering durable, stable, and crisp vision correction.

In 2025, global scleral GP material production reached 8 tons, with an average selling price of USD 3,002 per kilogram. Total installed capacity was approximately 12 tons, and the industry gross margin was about 20%–30%. The cost structure consists of approximately 60% direct materials, 33% manufacturing overhead, and 7% labor. The industry chain comprises upstream fluorosilicone acrylate monomer and additive suppliers, and downstream scleral lens manufacturers, mainly including ABB Optical, Visionary Optics, Essilor, and CooperVision.

This report studies the global Scleral GP Material production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Scleral GP Material and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Scleral GP Material that contribute to its increasing demand across many markets.
