A scleral lens, also known as a scleral contact lens and ocular surface prostheses is a large contact lens that rests on the sclera and creates a tear-filled vault over the cornea. Scleral lenses are designed to treat a variety of eye conditions, many of which do not respond to other forms of treatment.

Scleral contact lenses are large-diameter gas-permeable (GP) contact lenses. They cover the entire corneal surface and the white (sclera) of the eye. This provides a perfectly smooth optical surface to correct vision problems caused by corneal irregularities.

The smallest scleral lens are approximately 14.5 mm in diameter, and the largest can be up to 24 mm.
