## Abstracts

The global SCR Denitration Catalyst market size is expected to reach \$ 2479 million by 2032, rising at a market growth of 6.0% CAGR during the forecast period (2026-2032).

SCR Denitration Catalyst a type of catalyst that based on TiO<sub>2</sub> to promote reducing agents selectively reacts with nitrogen oxides (NO<sub>x</sub>, mainly NO and NO<sub>2</sub>) in the flue gas at a constant temperature, producing N<sub>2</sub> and H<sub>2</sub>O, removing NO<sub>x</sub> from flue gas.

SCR is a mature technology using in back-end processing, it is the most common technology used for DeNO<sub>x</sub>, especially in thermal power industry.

The major factors driving the market growth include the increasing demand for clean energy and the stringent environmental regulations that limit NO<sub>x</sub> emissions from various industries and vehicles. The technological innovations and developments in SCR Denitration Catalyst products and applications are also expected to boost the market growth]. However, some of the challenges that may hinder the market growth are the high cost and complexity of SCR Denitration Catalyst products; the competition from alternative NO<sub>x</sub> reduction technologies, such as low-NO<sub>x</sub> burners or non-thermal plasma; and the potential health and environmental risks associated with SCR Denitration Catalyst products

This report studies the global SCR Denitration Catalyst production, demand, key manufacturers, and key regions.
