Abstracts

The global SCR Denitrification System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Selective Catalytic Reduction (SCR) Denitrification System is a technology used to reduce nitrogen oxide (NOx) emissions from industrial processes, power plants, and other combustion sources. The SCR process involves injecting a reducing agent, typically ammonia or urea, into the exhaust gas stream. The exhaust gas is then passed over a catalyst, usually made of titanium dioxide or vanadium oxide, which triggers a chemical reaction that breaks down the NOx into harmless nitrogen and water vapor.

This report studies the global SCR Denitrification System production, demand, key manufacturers, and key regions.
