## Abstracts

According to our (Global Info Research) latest study, the global SCR Low Temperature Denitrification Catalyst market size was valued at US\$ 1570 million in 2024 and is forecast to a readjusted size of USD 2160 million by 2031 with a CAGR of 4.7% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

A Selective Catalytic Reduction (SCR) low-temperature denitrification catalyst is a specialized material used to remove nitrogen oxides (NOx) from exhaust gases at relatively low temperatures (typically 150°C to 300°C). The process involves the catalytic reaction of NOx with a reductant, such as ammonia or urea, to produce harmless nitrogen and water. These catalysts are crucial in industries and applications where exhaust gases cannot reach the high temperatures traditionally required for SCR systems.
