## Abstracts

The global Scrap Car Recycling Service market size is expected to reach \$ 118303 million by 2032, rising at a market growth of 9.0% CAGR during the forecast period (2026-2032).

Scrap Car Recycling Service is a regulated, eco-friendly professional service that collects, depollutes, dismantles and processes end-of-life vehicles, accident-damaged cars or unroadworthy automobiles; it safely removes hazardous fluids and waste batteries, recovers reusable components, recycles ferrous/non-ferrous metals, plastics, rubber and glass, and disposes of residual waste in compliance with environmental rules, turning discarded vehicles into renewable resources and reducing ecological risks.

Scrap car recycling services are trending toward higher-value, compliance-driven circularity: more depollution and traceable dismantling, stronger reuse of quality-tested parts, tighter handling of EV batteries and high-voltage components, and better digital integration (online intake, VIN-based part inventory, and insurer/auction platform linkages). Opportunities are expanding with growing ELV volumes, rising demand for affordable recycled parts, OEM and insurer sustainability targets, and improved recovery of critical materials (aluminum, copper, rare metals, and battery materials). Key challenges include volatile scrap prices, high labor and compliance costs (hazardous fluids, airbags, refrigerants, batteries), uneven quality control in the parts market, complex EV safety requirements, and the need to invest in advanced separation/shredder residue treatment while competing against informal dismantling and grey-channel exports.

This report studies the global Scrap Car Recycling Service demand, key companies,
