Abstracts

The global Scrap Metal Crushing Equipment market size is expected to reach \$ 3038 million by 2032, rising at a market growth of 7.9% CAGR during the forecast period (2026-2032).

In 2025, global sales of scrap metal crushing equipment reached approximately 18,200 units, with an average selling price of US\$95,000 per unit. Scrap metal crushing equipment is a type of heavy machinery used for the primary crushing and pre-processing of metal materials such as scrap steel, scrap aluminum, and scrap copper. It can crush large pieces of metal scrap into smaller, reprocessable pieces, improving the efficiency of subsequent shearing, briquetting, or smelting. Its upstream raw materials mainly include high-strength alloy steel, hydraulic system components, motors and transmission devices, wear-resistant plates, and control systems. Downstream suppliers include scrap metal recycling plants, renewable resource processing companies, and steel and non-ferrous metal smelting companies. In 2025, the global total production capacity was approximately 21,000 units, with an industry average capacity utilization rate of approximately 87% and an overall gross profit margin of approximately 27%. In terms of downstream consumption, recycled steel materials accounted for the largest share, followed by recycled aluminum and copper, while the demand for lightweight metal shredding continued to grow. Demand and opportunity analysis shows that with the continuous strengthening of global circular economy and resource recycling policies, the increased recycling rate of waste metal resources is driving the growth in demand for high-efficiency crushing equipment. In the future, there is significant room for technological upgrading and market expansion in the areas of automation control, energy efficiency optimization, wear-resistant design, and intelligent operation and maintenance.
