According to our (Global Info Research) latest study, the global Screen Printing Machinery market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Screen printing machinery is a type of stencil printing machine that uses a mesh material screen as the plate for printing.

Among the mesh material's grid, areas not needed for printing are solidified with emulsion to create a mask. Printing is then done using a plate that has been created to allow ink to pass through specific areas while blocking others. In the past, silk was used, and it was known as silk screen printing. However, nowadays, synthetic fibers such as polyester and nylon are mainly used.

This technique is based on a stencil, where dye is applied over a pattern-cut template. Unlike offset printing, a method that transfers ink to the plate, screen printing allows for a thicker application of ink.
