According to our (Global Info Research) latest study, the global Screen Printing Mesh market size was valued at US$ 789 million in 2024 and is forecast to a readjusted size of USD 1150 million by 2031 with a CAGR of 5.6% during review period.

Screen printing mesh, also known as silk screen mesh, is a woven fabric made from polyester, nylon, or stainless steel, specifically designed for use in the screen printing process. The mesh is tightly stretched and attached to a frame, creating a screen that acts as a stencil for transferring ink onto a substrate to create a printed image or design. Screen printing is commonly used in the textile industry for apparel printing,as well as in various other industries for printing on paper, plastics, glass, ceramics, and more. The quality and proper tensioning of the screen printing mesh play a significant role in achieving sharp and vibrant prints in the screen printing process. Screen printing mesh is divided into metal mesh and chemical fiber mesh from the weaving material. Metals are generally made of stainless steel, which has the characteristics of high tension and low elongation, but the price is very expensive, and its application is not very common. The chemical fiber screen printing mesh is generally divided into polyester material and nylon material. The difference between the two is that the polyester screen printing mesh has a low elongation rate, the mesh is less likely to be deformed, and the printing accuracy is high.The nylon material has its elasticity and can be applied to printing on non-planar materials, and it has wear-resistant characteristics.

Global key players of Screen Printing Mesh include Sefar, Asada Mesh, Saati, NBC Meshtec, Haver & Boecker, etc. The top five players hold a share about 44%. Asia-Pacific is the largest market, and has a share about 75%, followed by Europe and North America with share 12% and 10%, separately. In terms of product type, Stainless Steel
