Abstracts

According to our (Global Info Research) latest study, the global Screenless Plastic Granulator market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

A screenless plastic granulator refers to a type of machine used for shredding or granulating plastic materials without the use of a traditional screen or mesh. Instead of a screen, these granulators rely on a rotating knife and stationary knife assembly to break down plastic waste into smaller granules.

The absence of a screen in screenless plastic granulators offers some advantages. Firstly, it reduces the risk of clogging or jamming that can occur with traditional screen-equipped granulators, especially when processing materials with high levels of contamination or moisture. Additionally, screenless granulators are often easier and quicker to clean and maintain since there is no screen to remove and clean.
