Abstracts

The global Screenless Plastic Granulator market size is expected to reach $ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A screenless plastic granulator refers to a type of machine used for shredding or granulating plastic materials without the use of a traditional screen or mesh. Instead of a screen, these granulators rely on a rotating knife and stationary knife assembly to break down plastic waste into smaller granules.

The absence of a screen in screenless plastic granulators offers some advantages. Firstly, it reduces the risk of clogging or jamming that can occur with traditional screen-equipped granulators, especially when processing materials with high levels of contamination or moisture. Additionally, screenless granulators are often easier and quicker to clean and maintain since there is no screen to remove and clean.

This report studies the global Screenless Plastic Granulator production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Screenless Plastic Granulator, and provides market size (US$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
