According to our (Global Info Research) latest study, the global Screw Briquetting Machine market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

A screw briquetting machine is a type of mechanical briquetting equipment that uses a screw conveyor system to compress biomass materials into solid fuel briquettes. These machines are commonly used for recycling and densifying biomass waste such as sawdust, wood chips, straw, crop stalks, and other organic residues into high-energy fuel briquettes. Screw briquetting machines are known for their versatility as they can process a wide range of biomass materials, and they are relatively easy to operate and maintain. The end products, biomass briquettes, are not only a clean and efficient fuel source but also contribute to waste reduction and environmental sustainability by turning biomass waste into a valuable resource.
