Abstracts

The global Screw Cleaning Agent market size is expected to reach \$ 863 million by 2032, rising at a market growth of 4.9% CAGR during the forecast period (2026-2032). Screw Cleaning Agent (Screw purging compound) is a specialized cleaning product used for the screws and barrels of plastic injection molding machines, extruders, and other equipment. Its main functions include removing residue during color and material changes, eliminating carbon deposits and coking, and facilitating maintenance during shutdowns. Through physical friction or chemical reactions, it quickly and safely removes impurities adhering to the screw surface, saving time, reducing costs, and improving production efficiency.

Its upstream supply chain mainly includes base resins (such as PE, PP, PS, AS, etc., used as carriers), abrasives (such as calcium carbonate and glass fiber), surfactants, and specific chemical additives. Global sales in 2024 were approximately 619,000 tons, with an average market price of approximately US\$972 per ton. The industry's gross profit margin is in the range of 20%-35%.

Screw cleaning agents can significantly shorten color change downtime (typically reducing it by more than 50%), drastically lowering the scrap rate. This tangible economic benefit is driving small and medium-sized processing plants to accelerate the adoption of professional cleaning solutions, meeting the global manufacturing industry's ultimate pursuit of 'cost reduction and efficiency improvement.'
