Abstracts

The global Screw Degassing Valve market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Screw degassing valve is a type of valve that is used to remove dissolved gas from a liquid or paste, such as plastic, coffee, dairy products, pet food, etc. The valve is attached to a screw extruder or a flexible packaging format, such as a bag or a pouch. The valve has a unique float design that opens as air or gas collects in the valve and closes when liquid returns, allowing continuous expulsion of trace amounts of gas as it occurs. The valve can have a filter or not, depending on the product type and the requirements of the brand owners.
