The global Screw Fasteners market size is expected to reach \$ 71630 million by 2032, rising at a market growth of 3.2% CAGR during the forecast period (2026-2032).

A screw is a type of fastener, typically made of metal, and characterized by a helical ridge, known as a male thread (external thread) or just thread. A screw is an inclined plane wrapped around a nail. Some screw threads are designed to mate with a complementary thread, known as a female thread (internal thread), often in the form of a nut or an object that has the internal thread formed into it. Other screw threads are designed to cut a helical groove in a softer material as the screw is inserted. A screw will usually have a head on one end that contains a specially formed shape that allows it to be turned, or driven, with a tool.

China is the largest consumption region, with a consumption market share nearly 40%. North America is the second place consumption region with the consumption market share of about 20%.
