## Abstracts

The global Screw Grinder market size is expected to reach \$ 146 million by 2032, rising at a market growth of 3.0% CAGR during the forecast period (2026-2032).

In 2025, the global production of screw grinding machines reached 50,914 units, with an average selling price of US\$2,275 per unit. The global annual production capacity of screw grinding machines is approximately 80,000 units, with a gross profit margin of approximately 27.2%. A screw grinding machine is a specialized piece of equipment used for grinding screw components such as injection molding screws and extrusion screws. Its purpose is typically to achieve precise machining and finishing of the screw end face's flatness, roundness, concentricity, and geometric features such as screw grooves and threads, thereby improving the screw's working performance and lifespan. The upstream of the screw grinding machine industry chain includes steel and alloy materials, abrasives and grinding tools, lubricants and cooling media, etc.; the midstream consists of screw grinding machine manufacturers; and the downstream mainly includes industries such as plastics machinery and machine tools.

Screw grinding mills enjoy stable demand in the industrial abrasive processing field, primarily used for efficient, continuous, and low-heat-generating grinding processes. They are widely applied in high-precision machining in industries such as hardware, automotive, mold making, and electronics. The current market exhibits a trend towards large-scale, intelligent, and energy-optimized development. Domestic and imported brands are fiercely competing in terms of performance, stability, and after-sales service, with diverse price ranges. Users are focused on processing efficiency, surface quality, reliability, and maintenance costs, while the demand for customized solutions and integrated production lines is gradually increasing.

This report studies the global Screw Grinder production, demand, key manufacturers, and key regions.
