## Abstracts

The global Screw-in Suture Anchor market size is expected to reach \$ 1752 million by 2032, rising at a market growth of 7.1% CAGR during the forecast period (2026-2032). In 2025, global production of screw-in suture anchors reached approximately 5.0 million units, based on an average market price of around US\$ 210 per unit. Industry gross profit margins generally ranged from 55% to 75%, reflecting high value added from precision manufacturing, biocompatible materials, and clinical performance reliability. Global production capacity in 2025 was estimated at about 6.25 million units, indicating sufficient supply capability to support increasing orthopedic and sports medicine procedures.

Screw-in suture anchors are implantable orthopedic fixation devices designed to secure soft tissue to bone during surgical repair procedures. They are inserted by rotational screwing into bone and provide stable anchoring for sutures used in ligament, tendon, and labral repairs.

The industrial chain includes upstream biocompatible metals or bioabsorbable polymers, sutures, and surface treatment materials. The midstream focuses on precision machining or molding, sterilization, packaging, and quality assurance. Downstream applications mainly involve hospitals, orthopedic surgery centers, sports medicine clinics, and ambulatory surgical facilities.

The screw-in suture anchor market is expanding steadily as the volume of orthopedic and sports medicine surgeries continues to increase globally. Rising participation in sports, aging populations, and improved access to minimally invasive surgical techniques are key growth drivers. Screw-in anchors are favored for their strong fixation, predictable insertion, and compatibility with arthroscopic procedures. Ongoing innovation in bioabsorbable materials and anchor design is improving healing outcomes and reducing long-term implant presence. During 2026-2032, supported by surgical volume growth, technology upgrades, and expanding sports medicine indications, the

screw-in suture anchor market is expected to maintain stable growth and remain a core component of soft tissue repair procedures.
