Abstracts

The global Screw Micrometer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The Screw Micrometer is a more precise tool for measuring length than a vernier caliper. It can be used to measure length to an accuracy of 0.01mm, and the measurement range is several centimeters. A part of it is processed into a screw thread with a pitch of 0.5 mm. When it rotates in the screw sleeve of the fixed sleeve B, it will advance or retreat. The movable sleeve C and the screw rod are integrated, and its periphery is divided into 50 divisions. The number of full revolutions of the screw is measured by the scribed lines at intervals of 0.5mm on the fixed sleeve, and the part that is less than one turn is measured by the scribed lines around the movable sleeve. The final measurement result needs to be estimated to one decimal place.

This report studies the global Screw Micrometer production, demand, key manufacturers, and key regions.
