The global Screw Plier market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Screw pliers are a type of hand tool used for gripping and turning screws. They are commonly used in construction, woodworking, and other industries where screws are frequently used. The global market for screw pliers is driven by the growth of the construction industry, as well as the increasing popularity of DIY projects among consumers.

One of the key factors driving the growth of the screw plier market is the increasing demand for durable and high-quality tools. As construction projects become more complex and demanding, there is a growing need for tools that can withstand heavy use and provide reliable performance. Screw pliers that are made from high-quality materials and have ergonomic designs are particularly popular among professionals and DIY enthusiasts.

Another factor driving the growth of the screw plier market is the increasing adoption of power tools in various industries. While power tools such as drills and impact drivers are commonly used for driving screws, screw pliers are still essential for tasks that require precision and control. As a result, there is a growing demand for screw pliers that are compatible with power tools and can provide additional functionality.

In terms of regional market trends, Asia Pacific is expected to be a key growth market for screw pliers in the coming years. The region is experiencing rapid urbanization and industrialization, leading to a high demand for construction and manufacturing tools. Additionally, the increasing popularity of DIY projects in countries like China and India is

driving the demand for screw pliers among consumers.

A screw plier is a specialized tool designed for removing screws that are difficult to extract with a regular screwdriver. Developed from the basic design of pliers, screw pliers employ the principle of leverage to grip and turn objects with minimal effort. They are particularly useful for screws that are deformed, have damaged threads, are rusted, or have specialized head shapes that make them challenging to remove with conventional screwdrivers. By directly gripping the screw head, these pliers can effectively extract such problematic screws.
