According to our (Global Info Research) latest study, the global Screw Turbine market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Screw turbine, also known as an Archimedes' screw turbine, is a type of hydro turbine used for generating renewable energy from flowing water. It operates based on the principle of the Archimedes' screw, a device historically used for lifting water.

Screw turbine consists of a helical screw-shaped rotor mounted on a shaft within a cylindrical casing. As water flows through the turbine, the rotating screw captures the kinetic energy of the water and converts it into mechanical energy. The mechanical energy is then used to drive a generator for the production of electricity.

Screw turbines are especially suitable for low-head and low-flow hydropower applications, such as small rivers, irrigation canals, and wastewater treatment plants. They are known for their simplicity, reliability, and suitability for handling solid-laden water. Additionally, screw turbines can operate in both directions, allowing them to function efficiently regardless of the water flow direction.

The Global Info Research report includes an overview of the development of the Screw Turbine industry chain, the market status of Small Hydropower Station (Fish Friendly Screw Turbine, Ordinary Screw Turbine), Water Treatment Plant (Fish Friendly Screw Turbine, Ordinary Screw Turbine), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Screw Turbine.
