According to our (Global Info Research) latest study, the global Screw Type High Temperature Heat Pump Units market size was valued at US\$ 722 million in 2024 and is forecast to a readjusted size of USD 1069 million by 2031 with a CAGR of 5.8% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The screw high-temperature heat pump unit is a highly efficient and energy-saving heating equipment, designed for producing high-temperature hot water or steam, and is widely used in industrial heating, commercial hot water supply, and large-scale building heating. The unit adopts advanced screw compressor technology, can operate stably in a wide operating temperature range, and provides a water outlet temperature of up to 90°C or even higher to meet various high-temperature requirements. By extracting heat from low-temperature heat sources (such as groundwater, surface water or waste heat), energy utilization efficiency is significantly improved and operating costs are reduced. Equipped with an advanced control system, it can automatically adjust the operating status according to the actual load, optimize performance, and ensure the best energy efficiency ratio.
