According to our (Global Info Research) latest study, the global Screws market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A screw and a bolt (see Differentiation between bolt and screw below) are similar types of fastener typically made of metal and characterized by a helical ridge, called a male thread (external thread). Screws and bolts are used to fasten materials by the engagement of the screw thread with a similar female thread (internal thread) in a matching part.

Screws are often self-threading (also known as self-tapping) where the thread cuts into the material when the screw is turned, creating an internal thread that helps pull fastened materials together and prevents pull-out. There are many screws for a variety of materials; materials commonly fastened by screws include wood, sheet metal, and plastic.

The Global Info Research report includes an overview of the development of the Screws industry chain, the market status of Automotive (Self Tapping Screws, Non-Self Tapping Screws), Electronic (Self Tapping Screws, Non-Self Tapping Screws), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Screws.
