According to our (Global Info Research) latest study, the global Scuba Rebreather market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

A scuba rebreather is a type of breathing apparatus used by scuba divers that recirculates exhaled breath, removes carbon dioxide, and adds oxygen as needed to maintain a breathable gas mixture. This allows for longer dive times compared to traditional open-circuit scuba diving gear, as the user is not constantly expelling bubbles of exhaled gas. Scuba rebreathers work by filtering exhaled gas through a scrubber material which removes carbon dioxide and other impurities. Oxygen sensors detect the level of oxygen in the breathing loop and add more oxygen as needed to maintain the desired gas mixture. This process is known as closed circuit rebreathing.
